

## **< Waste Reduction and Recycling Charter >**

### **Charter Statement**

As a management group of private residential estates or buildings, by signing the Charter, we understand and agree that-

- ✓ Hong Kong's three strategic landfills are nearly saturated. We must reduce the waste disposal amount for protecting our environment and optimizing the use of land resources.
- ✓ The recycling rate of municipal solid waste needs to be further enhanced.
- ✓ All Hong Kong citizens can contribute to waste reduction at source and clean recycling to help sustain Hong Kong's development by gradually moving towards its vision of "Zero Waste • Carbon Neutrality".

To encourage residents to practise waste reduction and recycling, we are committed to -

- ✓ Establish and maintain an appropriate and convenient recycling system within the housing estate/buildings to facilitate residents to practise recycling
- ✓ Hand over the collected recyclables to downstream recyclers to ensure proper recycling processing
- ✓ Monitor the service contractors' recycling quality
- ✓ Keep recycling records
- ✓ Carry out promotion and education work to encourage all residents to participate in waste classification and develop the habit of waste reduction and recycling
- ✓ Publish quarterly recycling data regularly in common areas of housing estates/buildings to ensure transparency
